

Outdoor Sign Frames

Model#: COS410 series

Identify your business and attract customers! This sign frame is double-sided and has slide-in frames for top-loading access. The sign frame graphics can be easily updated without the need to replace the whole sign structure. This is one of the most effective forms of on site advertising that is used to promote a daily special, a week long promotion or even a permanent message. It can be used as pavement signs, sidewalk signs, driveway signs, entryway signs, sandwich board signs, etc., and will deliver your message day and night. The steel frame is attached to the base with dual springs that flex to withstand even strong wind gusts. The water tank base can be filled with sand or water for added weight. Handle and wheels make the board easy to transport. Corrugated plastic sheets or rigid PVC sheets are recommended for outdoor usage. Designed with channels to easily slide the signage in and out.

Product Features:
