

Sign Stand

CP5500 series

The steel sign base will accept almost any rigid sheet material and are commonly used to display PVC, corrugated plastic, MDF, composite aluminum or plastic sign boards. The unique M shaped steel base assemblies accommodate any self supporting substrate up to 1/2" thick. Unlike standard sign stands and floor standing sign holders, these metal sign holders are not limited to holding a particular size sign. The two sides of the steel base simply clamp the sign board in position and provide a stable base that allows you to free stand. Extremely cost effective, modern, frameless sign stand is sturdy as all the weight is centered on the floor.

Product Features:

- Ideal for indoor use
- Platen faces can have graphics
- Available in Black only
- Holds up to 1/2" thick rigid substrates
- Supports a single-sided or double-sided board
