- Holds up to 1/2" thick board
- Viewable from both sides
- Formed steel base
- Butterfly head bolts and nuts included
- Powder coated
- 1-year manufacturer warranty
- Available in black color only

The steel sign stand will accept almost any rigid sheet material and is commonly used to display PVC, corrugated plastic, MDF, composite aluminum, or plastic sign boards. The unique M shape steel base assemblies accommodate any self supporting substrate up to 1/2" thick. Unlike standard sign stands and floor standing sign stands, these steel sign holders are not limited to holding a particular size sign. The two sides of the steel base simply clamp the sign board in position and provide a stable base that allows you to stand freely. Extremely cost effective, modern, frameless sign stand is sturdy as all the weight is centered on the floor. Recommended for indoor use only.
